SUMMARY

Data analyst and M.S. Data Science candidate with a software engineering background and experience preparing large datasets, building interactive dashboards, developing API-based data pipelines, and communicating analytical findings. Proficient in Python, SQL, Excel, Tableau, Power BI, and statistical analysis.

TECHNICAL SKILLS

Analysis: SQL; Python (Pandas, NumPy, SciPy); Excel (PivotTables, XLOOKUP, SUMIFS/COUNTIFS, Power Query); data cleaning; exploratory data analysis; statistical testing; forecasting

Visualization: Tableau; Power BI; DAX; Matplotlib; Seaborn; Altair; Streamlit

Data & Tools: REST APIs; ETL; relational data modeling; MySQL; MongoDB; Jupyter; Git

PROFESSIONAL EXPERIENCE

Data Analyst Intern, MLS Analytics Program - IDX Exchange

Mar 2026 - Jun 2026

- Consolidate approximately 1M API-sourced MLS records - including 540K listings, 397K transactions, and 84 features - from multiple files into a unified dataset using Python, Pandas, Jupyter, and Git.
- Improve data quality by removing duplicate and incomplete records and preparing listing and transaction data for residential and competitive market analysis.
- Built two interactive Tableau dashboards from cleaned MLS data to analyze pricing, sales activity, days on market, and agent and office performance by geography and property type.

AI Code Evaluator (Contract) - Outlier and Alignerr

2024 - 2025

- Earned access to secondary quality-review assignments by evaluating and correcting LLM-generated Python, SQL, Go, and JavaScript responses for technical accuracy, instruction adherence, structure, and clarity.

Software Engineer, Site Speed Team - Ezoic

Jul 2021 - Jul 2023

- Automated contractor work-queue generation with Go workflows that ran multiple times daily, queried MySQL and MongoDB, and transformed operational site data.
- Reduced unsuccessful contractor assignments, contractor staffing needs, and manual engineering rework by redesigning site-eligibility checks and introducing a secondary review step.

SELECTED PROJECTS

E-commerce Revenue Analysis & Forecasting | [GitHub](#)

Python | Excel | Power Query | Power Pivot | DAX | Power BI | Prophet

- Created an analysis-ready relational model from nested product data spanning 1.9M order items, 1.0M orders, and 326K customers using Python, Power Query, and Power Pivot.
- Built DAX measures and an interactive Power BI dashboard that revealed approximately 76% revenue concentration in gummies and approximately 35% annual revenue concentration in Q4.
- Developed and evaluated a Prophet revenue forecast using time-series cross-validation, achieving approximately 15-18% MAPE.

Steam Game Sales Analysis | [GitHub](#) | [Dashboard](#)

Python | Pandas | REST APIs | SciPy | Streamlit | Altair

- Collected and structured data for 8.3K games and 463K price-change events through an API pipeline with rate limiting, retries, response caching, and incremental processing.
- Turned raw price events into discount and release-timing features, tested relationships with chi-square and Cramer's V, and published an interactive Streamlit dashboard.

EDUCATION

M.S., Data Science - University of Colorado Boulder

Expected May 2027

B.S., Computer Science - California State University, Long Beach

2020
